Diabetes is a global health epidemic affecting more than 300 million people worldwide. If present trends continue, it is expected that one in three Americans will be treated for diabetes during their lifetime. Often this care spans across a number of medical specialties, including primary care, endocrinology, cardiology, vascular surgery and others.

The Diabetes Collaborative Registry™ is the first global, cross-specialty clinical registry designed to track and improve the quality of diabetes and cardiometabolic medicine across the primary care and specialty care continuum.

The collaboration brings together the resources of the American College of Cardiology, the American Diabetes Association, the American College of Physicians, the American Association of Clinical Endocrinologists and the Joslin Diabetes Center.

The Diabetes Collaborative Registry enables participating practices to:

• Coordinate patient care across specialties to improve outcomes
• Identify opportunities to close gaps in diabetes care
• Track adherence to national performance measures at the provider and practice levels
• Inform care teams of the quality of their care compared to national benchmarks
• Ensure patients receive comprehensive care based on the latest research, science and guidelines

Find out how you and your practice can enroll today. Visit TheDiabetesRegistry.org or call 800-257-4737.
